

Madison College – Floats

In this next float exercise you'll recreate the Madison College home page using floats.

```
<style>
```

```
.wrapper {
margin-top:0px;
margin-left: auto;
margin-right: auto;
width: 955px; }
```

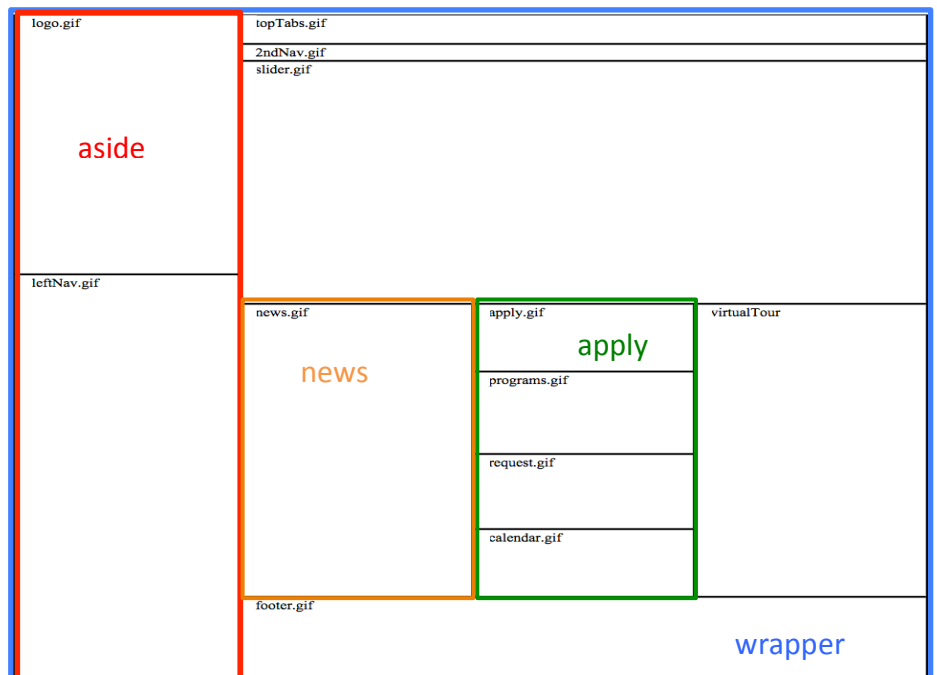

```
aside {
float: left;
width: 234px;
display: block; }
```

```
.news {
float: left;
width: 244px; }
```

```
.apply {
float:left;
width: 232px; }
```

```
img {
vertical-align: top;
border: 0 0 0 0; }
```

```
</style>
```

```

<body>
/*Start by adding your wrapper – don't forget the closing tag */
  <div class="wrapper">

/*The aside is 234px wide – the leftNav.gif will automatically drop below the logo. Once the
aside is closed – the content after it will float around it.*/
  <aside>
    
    </aside>

/*Because of the float in the aside – all of this content will wrap to the top of the aside*/
    
    
    

/*News will align below all the nav graphics*/
    <div class="news">  </div>

/*Apply div will float to right of news – below gifs will stack on top of each other */
    <div class="apply">
      
      
      
       </div>

/*When apply div is closed, whatever follows it will float to it's right side (only if there is enough
room*/
      

/*footer.gif will align with aside*/
      

</div>
</body>
</html>

```
